Organic Design 1930-1960, revived 1990 - present

Humanized design. Holistic approach:
Organic architecture is a **philosophy of architecture** which promotes harmony between human habitation and the natural world through design approaches so sympathetic and well integrated with its site, that buildings, furnishings, and surroundings become part of a unified, interrelated composition.

From <https://en.wikipedia.org/wiki/Organic_architecture>

Prime example: Frank Lloyd Wright

<https://www.google.com/search?q=frank+lloyd+wright+usga&rlz=1C113830h-596&rbmsischq=frank+lloyd+wright+buildings&evld=1463113666&sa=X&ved=2ahUKEwjaMeFps1LhUgGcmMHevDeG1D0ag>

Also Charles and Ray Eames: unity of structural, material, functional design
 More on them when we do Chairs

<https://www.fastcompany.com/3055758/tracing-the-long-controversial-history-of-organic-design>

MOMA show in 1941: Winner got their piece mass produced. Prior, organic design was natural materials, made with Arts and Crafts dedication. Often curved forms but not always (think Art Deco). After 1941, crafts portion was demoted.

Other Organic design furniture

https://en.wikipedia.org/wiki/Glass_House

Led to Biomorphism, Biomimetics, in robotics today
 Unlike Organic Design, which is informed by nature and attempts to capture its abstract essence, Biomorphism copies and often distorts forms found in the natural world for purely decorative purposes.
 From Fiell *Design of the 20th Century*

Biomorphism is an **art movement** that began in the 20th century. It models artistic design elements on **naturally occurring patterns**, or shapes reminiscent of nature and living organisms. Taken to its extreme it attempts to force naturally occurring shapes onto functional devices.

From <<https://en.wikipedia.org/wiki/Biomorphism>>

Kidney shaped pools; kitschy 1950's appearances.
 Why is this attractive? Contour Bias - part of Universal Principles of Design, (UPD) coming up after history.

Streamlining 1930-1950

Streamlines in a flow are defined by being tangent to the flow field. Streamlines show the direction of the flow.

<http://www.ams.sunysb.edu/~dyu/album/node3.html>

aspect ratios = 2.

When an object follows the contours of the flow streamlines, drag is reduced (form drag, not viscous drag). This is 'streamlining' the object.

THE CURVE.

Now draw carefully the curve, working at the same time as the cube, and then (Fig. 21) gradually decrease its depth of tone as it recedes from the cube. Shade this shadow as light as the light part. Put in the background and ground plane rather lighter than the cube.

Step II (Fig. 22)—The two perpendicular lines were drawn in depth of tone. Consider the tone of the shadow in relation to the cast-shadow and the background, and of the light in relation to all three. Shade each of an oval and, repeat in depth on the opposite part of each.

Step III (Fig. 23)—Begin using the reflected light from the ground-plane and partly in the effect of contrast. A light gradient appears on each perpendicular face, working from the more horizontal corner and along the light edge towards the left. Lay on such carefully (see Fig. 23), being careful not to get down too dark. (The lower part of the side near the cast-shadow receives little reflected light, and should be slightly shaded.)

Step IV—The cast shadow is ~~dark~~ to represent the cube, and to render it more general. The same part (Fig. 24) Add the gradient to the shadow.

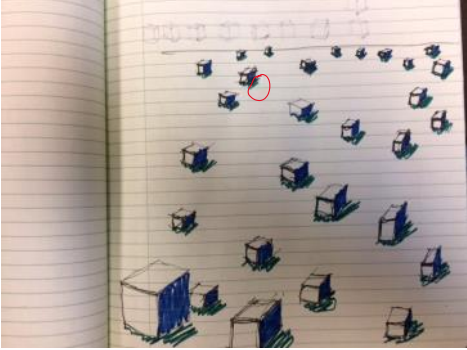

The upper face, the top edge, and the edges to the back, where the effect of contrast with the darker perpendicular faces will help to make it lighter still. Lay the gradient very lightly. It may be necessary to keep the strong values entirely of itself.

The background may now be darkened along the edge of the top face (again the effect of contrast), and the drawing is complete.

Fig. 24 shows the same cube without a background. In this case it may be necessary to fairly mark with a crayon the farther edge of the top face.

The use of various tones—of two shades of different tints—may be used, and the effect of the tone will appear still more fully when the eye receives light from the [See "Color," Chap. 1.]

HW 5
Draw a plane of cubes, with shading
Adding a bit of shading makes it look like art.

Got to here

Shadow in 2 point perspective

- Three levels of rigor:
- 1) Assume diffuse light, and shade undersides. Guess at shadow outline, fade edges of shadow.
 - 2) Assume sunlight, parallel light. Draw parallel lines from each corner, guess at intersection with ground plane (sketching: The Basics method). Violates 2 point perspective, however.
